The programme prepares students in the practical application of operations research in the management of operations and environmental management.

It provides practical training in areas of biological, ecological, chemical, physical, and environmental sciences, and is highly ranked in several fields.

Compete against the best in the world and add value to your career.

Student study options include a Bachelor of Science (Hons) in Biotechnology, a Master of Science in Biotechnology, and a PhD in Biotechnology.

Studying Biotechnology at INTI University College provides students with a solid foundation in the fundamentals of biotechnology, as well as practical experience through internships and industry-based projects.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.

Students will have the opportunity to study in top-rated laboratories and develop skills in areas such as bioprocessing, bioproduction, and bioprocess control.

The programme is designed to prepare students for careers in the biotechnology industry, as well as for further studies in the field.

The programme offers a variety of specializations, including molecular biology, biopharmaceuticals, biotechnology, and bioinformatics.
